About me

Creating everything limited only by your imagination, interconnected to millions of people around the globe, is yet so wonderful and powerful.

In every generation cycle we see creative ideas being developed by intelligent people that impact our lives. Seeing those new and novel projects is my *raison d'être*, in my journey to do something similar.

Experience

- Computer science fundamentals: data structures and algorithms.
- Confident in creating (interactable) modern websites.
- Familiarity with networking principles such as: HTTP, TCP, UDP, (web)sockets and Peer to peer.

Projects

- Portfolio
A personal website showcasing my skill set and personality. Written in html, css, javascript, and python. And made possible with the Web Animations API, and Websockets library for the mailer module, using a proxy server.
- Discord API Wrapper
Used for creating a simple Discord bot, written in python, with as little overhead as possible. And minimal amount of libraries, and external dependencies: Websockets-client and Urllib3.
